Year of GSP  
Renewal

Headquarters: Nashville, Tennessee  
US Employees: 9  
GSP Imports: Press brakes, shears, and plasma machines from Turkey

*“GSP savings allow us to stay competitive in the machinery market. With GSP renewal, we have been able to grow our company while still providing excellent customer service.”*

Patrick Canning, President

For over 60 years, Fab-Line Machinery has earned a reputation for superior quality and meticulous attention to detail in the metal fabricating machine industry. With GSP, Fab-Line is able to provide high-quality, low-cost machinery to American manufacturers while creating jobs in Nashville and St. Charles, Illinois.

GSP expiration in 2013 raised the cost of Fab-Line’s machines by \$7,500 each. This hurt the company, which had to lay off one employee, and the American manufacturers that now had to pay more for Fab-Line’s equipment.

GSP renewal **allowed Fab-Line to hire a new service manager and service engineer.** GSP benefits are vital to Fab Line’s ability to stay competitive and grow its business while keeping costs low for U.S. manufacturers.
